Spice Island™ Koreanspice Viburnum *Vib. carlesii* 'J.N. Select A'

H: 4-5' S: 5-6' Z: 4 Exp: ☀

Spice Island™ was selected in 2000 at Johnson's Nursery, Inc.™ from open-pollinated *Viburnum carlesii* seedlings. It is a compact form which develops much more uniformly during the production process. This cultivar branches better than other *Vib. carlesii* 'Compacta' cultivars in the trade, making for fewer one-sided or poor structured plants. Spice Island™ matures at one half to two thirds the size of a typical *Viburnum carlesii* plant.

KOREANSPICE VIBURNUM

Sugar n' Spice™ Koreanspice Viburnum *Vib. carlesii* 'J.N. Select S'

H: 6-8' S: 6-8' Z: 4 Exp: ☀

Sugar n' Spice™ is an exceptionally heavy flowering cultivar with the same sweet-spiced, floral fragrance for which the species is known. The flower clusters are smaller than average, but are much more plentiful throughout the body of the plant. Sugar n' Spice™ needs at least 6 hours of sunlight and rich, moist well-drained soil to perform at its peak. Sugar n' Spice™ is a standard sized plant with excellent density.

The plant was selected in 2000 by Michael Yanny from the production fields at Johnson's Nursery, Inc.™
