Selected from a crop of open-pollinated *Malus sargentii* seedlings by Michael Yanny at Johnson's Nursery, Inc.™ in the mid 1980s, Firebird® is highly resistant to all major diseases of crabapples, and has very clean, crisp, dark green foliage. Red to pink flower buds open to single, white, sweet smelling blooms.

Firebird® Crabapple has outstanding fruiting qualities. Its small red crabapples coat the branches of the tree throughout the fall and winter. It is among the best cultivars for winter fruit color, rivaling Red Jewel™ and 'Donald Wyman' crabapples.

Growers Licenses Are Available
